Отчёт по шестому этапу индивидуального проекта

дисциплина “Операционные системы”

Кочина Д. С.

26 мая 2023

Российский университет дружбы народов, Москва, Россия

Вводная часть

Цель работы

Целью пятого этапа индивидуального проекта является добавление к сайту остальных элементов.

Основная часть

Персональные проекты

- Сделала записи для персональных проектов. Для этого перешла в папку contents -> project и сделала необходимые изменения. Затем проверила информацию на сайте.

Персональные проекты

```
---
title: The problem of environmental pollution
summary: Individual final project
tags:
  - Deep Learning
date: '2022-05-04T00:00:00Z'

# Optional external URL for project (replaces project detail page).
external_link: ''

image:
  caption: Photo by rawpixel on Unsplash
  focal_point: Smart

# Slides (optional).
#   Associate this project with Markdown slides.
#   Simply enter your slide deck's filename without extension.
#   E.g. `slides = "example-slides"` references `content/slides/example-slides.md`.
#   Otherwise, set `slides = ""`.

---
```

Individual project

Пост недели

- Я ввела в терминале команду ~/bin/hugo new post/last_week3. Далее написала пост по прошедшей неделе и проверила изменения на сайте.

Пост недели

```
dskochina@dk5n59 ~/work/blog $ ~/bin/hugo new post/last_week3
Content dir "/afs/.dk.sci.pfu.edu.ru/home/d/s/dskochina/work/blog/content/post/l
ast_week3" created
dskochina@dk5n59 ~/work/blog $
```

My last week was not bad. I ate bananas and watched TV. On Friday I went to the cinema with my boyfriend. It was cool!

How I spent last week
May 4, 2023 · 1 min read
My last week was not bad. I ate bananas and watched TV. On Friday I went to the cinema with my boyfriend. It was cool!

Пост на тему

- Я ввела в терминале команду ~/bin/hugo new post/programming_languages. Затем я создала пост на тему по выбору: Языки научного программирования. Я создала пост, размещая необходимую информацию и проверила изменения на сайте.

Пост на тему

```
dskochina@dk5n59 ~/work/blog $ ~/bin/hugo new post/programming_languages
Content dir "/afs/.dk.sci.pfu.edu.ru/home/d/s/dskochina/work/blog/content/post/p
rogramming_languages" created

In computer programming, a scientific programming language can refer to two degrees of the same concept.

In a wide sense, a scientific programming language is a programming language that is used widely for computational science and computational mathematics. In this sense, C/C++ and Python can be considered scientific programming languages.

In a stronger sense, a scientific programming language is one that is designed and optimized for the use of mathematical formula and matrices. Such languages are characterized not only by the availability of libraries performing mathematical or scientific functions, but by the syntax of the language itself. For example, neither C++ nor Python have built-in matrix types or functions for matrix arithmetic (addition, multiplication etc.); instead, this functionality is made available through standard libraries. Scientific programming languages in the stronger sense include ALGOL, APL, Fortran, J, Julia, Maple, MATLAB and R.

Scientific programming languages should not be confused with scientific language in general, which refers loosely to the higher standards in precision, correctness and concision expected from practitioners of the scientific method.

In computer programming, a scientific programming language can refer to two degrees of the same concept.

In a wide sense, a scientific programming language is a programming language that is used widely for computational science and computational mathematics. In this sense, C/C++ and Python can be considered scientific programming languages.

In a stronger sense, a scientific programming language is one that is designed and optimized for the use of mathematical formula and matrices. Such languages are characterized not only by the availability of libraries performing mathematical or scientific functions, but by the syntax of the language itself. For example, neither C++ nor Python have built-in matrix types or functions for matrix arithmetic (addition, multiplication etc.); instead, this functionality is made available through standard libraries. Scientific programming languages in the stronger sense include ALGOL, APL, Fortran, J, Julia, Maple, MATLAB and R.

Заключение

Вывод

В процессе выполнения данного этапа проекта, я приобрела практические навыки по созданию сайта, получила новые знания. Добавила к сайту остальные элементы.
